**CYBERTOOLS®
ADDITIONAL
SERVICES**

E-RESOURCE UPDATES

Promote your valuable resources by employing our expert catalogers to keep your public online catalog and A to Z lists current. Up to ten (10) collections are updated annually, semi-annually, or quarterly. Arrange for additional collections at modest rates.

All The Right Results: The CyberTools Difference

After harvesting, records are auto-corrected for a wide range of content provider data flaws such as incorrect titles, character encoding, missing or incorrect ISSNs, ISBNs, duplicates, and more.

Your catalog database is updated so titles can be found via both your public search catalog and fundamental A to Z lists such as "E-Books" and "All Books". Then when Solver is also selected, when patrons/staff search PubMed, Google Scholar, UpToDate, or click on any content provider's citations, full text requests are redirected to the correct online and print resources. A customizable document delivery form is provided for exceptions as needed. Google Scholar is kept current with all your online and print resources.

SOLVER, THE CYBERTOOLS LINK RESOLVER

One low fee includes all resolvers.

PubMed LinkOut Outside Tool

When searching PubMed with a LinkOut identifier set up for CyberTools, Solver redirects PubMed full text requests to the correct online and print resources. A customizable document delivery form presents as needed.

UpToDate®

Link to your journal article subscriptions at the point of care with citation full text linking via Solver.

Ovid

Link to non-LWW full text articles (example: ClinicalKey) from Ovid database search results.

EBSCO ◆ CINAHL ◆ EDS ◆ MEDLINE ◆ eBooks

Link to non-EBSCO full text articles from EBSCO database search results.

Elsevier ◆ ClinicalKey ◆ ScienceDirect

Link to non-Elsevier full text articles from Elsevier database search results.

OCLC ILLiad

Solver includes a document delivery system at no fee. Current OCLC ILLiad subscribers - or any libraries that don't have the staff to manage document deliveries - can now use OCLC ILLiad as a document delivery solution with Solver.

Google Scholar

Once Google Scholar goes live with Solver, CyberTools will transform Google Scholar into your free discovery tool for both e-resources and print! Your patrons can use the familiar Google Scholar to link to all your resources: Electronic and print journal articles, e-books, and print books. CyberTools exposes your collection to Google Scholar, which then links your citations to CyberTools, where Solver resolves/redirects to the e-resource or the collection's print location. Includes optional customizable document delivery. Our work is currently in the implementation queue with the Google Scholar team.
